- Conservatory Installer of the Year 2023
- 10-year warranty on all windows and separate 10 year insurance backed guarantee
- Option to buy now and pay later (9 months). 5, 10 and 15 year funding options are also available
- 4.5/5 rating on review site reviews.io
- Members of GGF and Fensa
- Meet all British Standards for manufacturing
- All planning requirements taken care of
- Windows and doors are taken away and recycled where possible
- Workmen neat and tidy, NVQ and MTC-trained
- Full aftercare provided by our dedicated service team

Choose quality

We are one of the north of England's largest and oldest home improvement firms – established in 1971.

Our family-owned and run business prides itself on quality manufacturing processes, expert fitting, and superb customer care.

Employing over 300 staff, we are trusted and recognised throughout the UK, and customers have peace of mind in dealing with a long-standing business whose ethos is providing exceptional quality and service.

Choosing your perfect window

Secure your home

Every window is fitted with a multi-point locking system and rigorously tested to comply with the Secured By Design standards for security – offering customers the highest levels of security. We have a large range of hardware to complement your home

Find your perfect style

EYG windows come in a wide range of styles – offering something for every type of home, whether it is a contemporary flat or chocolate box cottage.

Peace of mind

Our windows all come with a ten-year warranty, and our dedicated customer service team and expert engineers are on hand in the event of any problems.

And don't forget about energy efficiency...

All of our windows are A-rated as standard and come with Super Spacer technology, which when coupled with Low E glass, can reduce heat loss by a staggering 94%, as well as cutting CO2 emissions.

View the world from a
new perspective

Flush Casement

A flush casement uPVC window is one where the opening pane is held on hinges within a frame, but the opening part does not project out from the frame. Instead, it lies aligned or 'flush' with it. A design which has been around for centuries, they are one of the most common UK window styles.

Perfect for historic properties which need to replace rotting or ageing timber flush windows, they boast clean sightlines and a fuss-free finish. With flush casement uPVC windows now virtually indistinguishable from the traditional timber version, forward-thinking planning authorities are open to the idea of using them in conservation areas.

Fitted with multi-point locks and 24mm double glazing as standard, these windows look authentic and are highly secure. Thanks to their egress hinges, which allow the window to open fully, they can also act as the perfect escape route if ever there was an emergency.

Made using multichambered sections to maximise the insulating qualities of the PVC-U from which they are made, flush casement windows will help your home maintain a comfortable temperature all year round. Long-life weather seals will reduce draughts to prevent your property from feeling cold and damp, even if it is a traditional or period home.

Tilt and Turn

Tilt and turn windows are a fantastically simple, stylish and contemporary solution which will suit either a modern or traditional property.

By giving homeowners the option to have their windows slightly vented or completely wide open - depending on the season and weather, controlling the temperature of a room has never been easier.

With the twist of a handle, our tilt and turn windows can be completely opened, perfect for those hot summer months. Or with a half-turn, the window can be restricted to a small airflow.

And because the windows open fully inwards, cleaning the exterior glass is easy. This makes tilt and turn windows perfect for use in high-rise apartments or for people who want to safely clean their own upstairs windows. They are also an extremely effective fire escape in case of emergency.

Simple and versatile, this popular windows style will enhance the look and value of any property. As with all EYG double glazing, our tilt and turn windows are fitted with energy-efficient A-rated glass as standard - the highest possible window energy rating. This means you will benefit from the best double glazing available, with up to 94 per cent of energy loss preventable.

Sliding Sash

Sliding sash windows are carefully crafted to give your home the attractive appearance of traditional sashes, whilst being easy to use and highly energy efficient.

Perfectly suited to period homes, where retaining the traditional character of the property is essential, double glazed sash windows will give you years of trouble-free enjoyment.

Even if you live in a modern property, uPVC sash windows will still enhance the look, feel and style of your home by combining the highest-performing double glazing technology with the traditional charm and character you'd expect from an original timber sash window.

Designed to replicate a box sash feel, our uPVC sash windows are manufactured to the highest standards - keeping your home secure and reducing your heating bills at the same time.

Having conducted extensive research into the aesthetic appearance that conservation bodies will allow across the UK, our verticals sliding sash windows have been developed to look authentic.

Bay & Bow Windows

Beautiful bay windows allow you to enjoy panoramic views and flood your home with natural light. Traditional in appearance, a bay window acts as a focal point & creates the illusion of extra space.

Suitable for modern and traditional properties, the beauty of bay window double glazing is that it continues to be a timeless classic. No wonder it remains one of the UK's most popular choices.

Available in a huge range of styles, we can design and manufacture this timeless classic to suit any angle. Use their angled lines to let more natural light in and give your home added kerb appeal.

Having been approved by the security watchdog Secured By Design, all our bay windows double glazing has enhanced security features – making your property safer and stylish.

Select your size, frame style and preferred material - uPVC, aluminium or wooden - and we will configure them to your exact specification. Add a canopy or customise the windows any way you want to.

UPVC Windows

UPVC windows are perfect for almost any home because of their modern and stylish appearance. Featuring the latest double glazing technology, uPVC windows now come with A-rated glass as standard

By investing in new uPVC windows, you are guaranteed to get unparalleled protection against the cold and filter out any unwanted external noise. And because of advances in window technology, our A-rated glass will ensure your home is cool in summer but warm and cosy in winter.

As an experienced double glazing manufacturer and installer, EYG has been fitting uPVC windows UK wide for over 50 years. If you're looking for a high security and low-maintenance window, take a look at our wide range of uPVC windows online now.

Manufactured from A-grade uPVC and supplied with a 10-year warranty, they will not rot, peel, bend, warp, flake or fade in sunlight. They also prevent up to 94 per cent of heat loss and could help to reduce your energy bills.

Here at EYG, we supply and fit bespoke uPVC windows made to measure, so the choice of finish and colour is completely up to you

Coloured UPVC Windows

Coloured uPVC windows are a subtle way to add a striking and contemporary design feature to any property. Stylish and guaranteed to enhance the appearance of your home, there are a wide range of UPVC colours for windows to extend your design scheme from inside to outside.

With many style-conscious homeowners now moving away from traditional uPVC windows and turning towards coloured uPVC frames, this style is one of our fastest-growing ranges.

Make a modern home look more imposing with black uPVC windows or use grey uPVC windows to bring out period features in an older property. For a cosy cottage-style, cream uPVC windows are perfect and look amazing when paired with light-coloured bricks or a painted render finish.

With a wide range of RAL colour options available and A-rated glass fitted as standard, choose the fade resistant coloured uPVC windows that are just right for you - and backed by a ten-year repair or replace warranty.

We can supply and fit a wide range of coloured uPVC windows – including sash, casement or tilt and turn.

Aluminium Windows

Aluminium windows are strong, durable and a great way to make a style statement on a traditional or modern property. Sleek, stylish and built to last, aluminium windows are always an eye-catching addition. Versatile in function and design, they'll transform any modern or traditional home - flooding it with light without compromising on style.

Perfect for those projects which require a contemporary finish, aluminium windows are strong, lightweight and can be shaped to create a truly unique appearance.

Popular in apartments and multi-storey buildings for decades, in recent years homeowners have fallen in love with black and anthracite grey aluminium windows because of their stylish simplicity.

Whether you're planning a new build or simply replacing existing frames, we can create bespoke made-to-measure aluminium windows that carry the Secure by Design accreditation – a safe and sound financial investment.

EYG is a bespoke aluminium windows UK manufacturer and can cater for any style of property or window design.

Steel-look Windows

Steel-look windows are the latest interiors trend which is gripping the UK, characterized by black industrial-style frames with glass panels. This new range of lookalike steel windows and doors looks equally at home on either period or new properties, and makes a huge style statement.

If you want windows which make an impression - look no further than the Steel-look range. These UPVC or aluminium windows, which are typically black frames with glass panels, look incredible on any style of home.

Steel-look windows (also known as Heritage windows) originate from the 1800s and are featured on notable buildings in the UK, including the Houses of Parliament.

At EYG, we love the Steel-look style and have dealt with a number of recent inquiries which led to us creating our own more economical version of this famous window style.

Our Steel-look windows are made using either UPVC or aluminium to re-create the familiar signature style at a more affordable price point by using an astragal bar inside and outside the glass to create the same effect, coupled with black frames.

Curtain Walling

Curtain walling is increasingly sought-after in domestic properties where architects and house builders are wanting to create striking designs using large expanses of glass. If you are designing or building a house where floor-to-ceiling windows are required – curtain walling is a great option.

Curtain walling can span two or more floors and go right up to the roof ridge – creating a light-filled property with a truly bespoke luxury feel.

A curtain wall is a structure in a house or commercial building that is constructed from an aluminium frame and glazed.

It allows large expanses of space to be glazed, which is very sought-after in contemporary houses which are made up of more glass than bricks on some elevations.

curtain walling used to be just reserved for commercial buildings, but is now increasingly seen in the domestic glazing sector. Curtain walls are weather resistant so make a strong and secure option for weather-proofing a building, and they are also highly thermal efficient.

EYG's curtain walling has A-rated glass as standard.

Energy Efficiency & Sustainability

Buying A-rated windows – which means they’re among the most energy-efficient on the market, will protect your home against heat loss, condensation, and damp.

Choosing windows, doors and conservatories with Super Spacer® and low E glass may seem a long way from saving the planet, but the insulating properties of our thermally efficient spacer bar are such that they can reduce heat loss by a staggering 94% through your windows

Less heat loss means lower fuel bills for you.

Less energy consumed results in lower carbon emissions.

This is good news for the environment.

By choosing energy efficient windows with Super Spacer® you can cut your CO₂ emissions and save on fuel bills significantly.

There is already now a legal requirement, introduced in June 2022, for all new windows to include trickle vents to improve air flow and quality in homes, and reduce mould and condensation.

-  Our Windows are A-rated as standard for energy performance
-  We use renewable energy systems to reduce cost of manufacturing
-  Old UPVC windows removed from homes are recycled
-  Re-use old wooden windows from customers' homes for heating

Bringing energy efficiency home

Lowering heating bills, for life

Saving the planet doesn't cost the world

up to **2db** noise reduction

Sealed units featuring Super Spacer® Warm Edge technology have been proven to reduce noise transmission by up to 2db.

up to **65%** warmer at the edge

Windows fitted with Super Spacer® have a warmer internal edge temperature of up to 65% reducing heat loss through the edge of the glass.

"Windows fitted with Super Spacer® have a warmer internal edge temperature of up to 65%"

Reduces energy costs

80% of the energy lost through a window occurs at the edge of the glass because of the highly conductive nature of aluminium spacer. Super Spacer® blocks the heat loss and reduces energy costs.

up to **70%** reduced condensation

Super Spacer® reduces condensation by up to 70% virtually eliminating the potential breeding ground for mould growth and the bacteria that can be harmful to those who suffer from asthma.

"Reducing condensation by 70% virtually eliminates mould growth and the bacteria that can be harmful to those who suffer from asthma"

aluminium spacer

super spacer

up to **950x** times less conductive

Super Spacer® is 950 times less conductive than standard aluminium spacer, blocking thermal bridging from the outside surface.

"80% of the energy loss through a window occurs at the edge because of the highly conductive nature of aluminium spacer."
